Subject: 1 Peaslee Rd alna

Joe,

See attached a letter responding to your request for known wildlife resources associated with the project you described to me associated with replacement of the septic tank at 1 Peaslee Rd Alna Maine. If the excavation and replacement of the new, larger volume tank and system components occur overlapping with the failed tank, no new forested vegetation is cleared for the project, and the construction occurs between October 15th and April 15th of 2022/23 MDIFW has no other recommendations specific to replacement of the septic tank, pumping station, leach field and associated plumbing connections.

If you or the planning board have other questions let us know.
