Mr. Scribellito and the Town of Alna,

I am writing this letter to review the septic design that I have prepared for 232 Head Tide Road Alna. The replacement design that I have prepared is designed to replace an old failing trench system located on the property. I tested the soil and measured all of the setbacks for the new system design including distance to the river, drilled well, dug well, buildings and a drainage ditch located behind the proposed new system. I believe that the location and type of system that I designed is the best suited for the site and will give excellent treatment of the wastewater and eliminate the problems of the failing system. I welcome any questions about my findings and my system design. I can be reached at the above address or on my cell phone 207-631-1549.

Thank you very much,

Daniel P. Colby
